

# Learn RISC-V. Think like a computer.

An approachable, hands-on way to explore computer instructions.

## A simpler path into RISC-V

LearnRisc.com is an interactive learning environment designed to make RISC-V clear and approachable. Start with a focused set of instructions, see how each one works, and build programs without losing sight of the underlying ideas.

1

### DESIGN WITH AI

Describe the program you want to create. Use AI as a coding partner while you remain the system designer.

2

### LEARN BY ASKING

Use AI as your RISC-V reference. Ask about an instruction, register, memory address, or error whenever you need help.

3

### TEST IN A FEW CLICKS

Assemble, inspect, run, and revise your code quickly. Immediate feedback makes experimenting part of the lesson.

## Your ideas lead. LearnRisc helps you build them.

Learn at your own pace, modify working examples, and see the results immediately.

## Help shape what comes next

We hope you enjoy LearnRisc. Your experience, comments, and suggestions will help guide future examples, lessons, and simulator features.
